Chips Ænoblend Pure

Natural and fruity

Chips which adapt to your desired style of wine, with an unrivalled precision of aromas. A blend of chips from French oak *Quercus Robur* or *Quercus Sessiliflora*. The oak used is chosen by our experts and aged naturally for 24 months in the open air.

ENOLOGICAL INTEREST

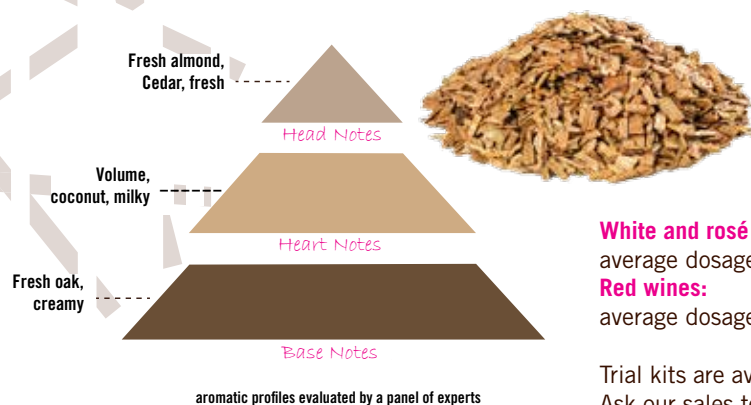

The blend of the different toasts and origins of oak is the result of analytic and sensory investigations carried out by aromaticians and winemakers.

Sensory profile: Natural and Fruity.

- > **Ænoblend Pure chips** may be used during alcoholic and malolactic fermentation, on white, red and rosés wines. **Ænoblend Pure** reveals the fruity profile of the wine **without adding woody notes**, and reinforces the mouthfeel and the length, by working with the interactions between the microorganisms and the wood.
- > **Ænoblend Pure chips** may also be used during ageing, particularly for red wines but also for white and rosé wines. It gives to the wine **fresh and fruity notes**.

THE SENSORIAL PYRAMID

The **sensorial pyramid** approach which is widely used in perfumery, helps to define the **olfactive family** and the **perceived smells**. Applied to the creation of blends of chips, it allow to characterise the **aromatic family** with an unrivalled precision by classing the aromas by order of **intensity and volatility**.

DOSAGE

> The dosage depends on the desired type of product. It is recommended to start with trials or to ask your consultant.

White and rosé wines:

average dosage 0.5 to 1.5 g/L.

Red wines:

average dosage 1.5 to 3 g/L.

Trial kits are available on request.
Ask our sales team.

USAGE AND RECOMMENDATIONS

- > Use by directly submerging the infusion nets in the must or the wine.
- > **During alcoholic or malolactic fermentation:** before filling the tank, it is recommended to attach or weigh down the infusion nets to the bottom of the tank to avoid them floating up to the surface. **The contact time** depends on the length of the fermentations, either 10 days to 4 weeks, preferably on fine lees.
- > **During maturation:** stir the wine during the first few weeks of contact in order to increase the extraction and the homogenisation. For red wines, mixing may be carried out along with the addition of oxygen. Follow the recommendations of your consultant winemaker. **Optimal contact time:** from 4 to 8 weeks, according to tasting.

CONDITIONNEMENT

- > 18 kg bags, containing 3 infusion nets of 6 kg.
